

Objective: SWBAT convert from one unit to another by way of conversion factors and describe in writing what the solutions to problems mean to the real world.

Warm-Up

1. Solve the proportion

$$\frac{76}{x} = \frac{213}{423}$$

Objective: SWBAT convert from one unit to another by way of conversion factors and describe in writing what the solutions to problems mean to the real world.

Measurement Conversion

ELG N.3 Use units to solve problems

Key Word: Conversion Factor

Objective: SWBAT convert from one unit to another by way of conversion factors and describe in writing what the solutions to problems mean to the real world.

Conversions Factors to know:

1 inch = 2.54 centimeters

1 gallon = 3.79 liters

1 hour = 60 minutes

1 ounce = 28.9 grams

1 yard = 0.926 meters

1 meter = 3.28 feet

1 mile = 5280 feet

Objective: SWBAT convert from one unit to another by way of conversion factors and describe in writing what the solutions to problems mean to the real world.

When dealing with unit conversions there are two ways to approach them.

One way is if you are converting units to the same units.

This is going to allow us to use a simple proportion to solve it.

Objective: SWBAT convert from one unit to another by way of conversion factors and describe in writing what the solutions to problems mean to the real world.

Practice

1. On Sunday you plan on studying for 893 minutes. How many hours is that?

$$\begin{array}{r} 893 \text{ min} \\ \hline X \text{ hr} \end{array} \quad \begin{array}{r} 60 \text{ min} \\ \hline 1 \text{ hr} \end{array}$$
$$\frac{893}{60} = 14.88 \quad x \approx 14.9 \text{ hrs}$$

Objective: SWBAT convert from one unit to another by way of conversion factors and describe in writing what the solutions to problems mean to the real world.

Practice

2. I walked 5 meters today, how many feet is that?

$$3.28 \times 5 = 16.4$$
$$\frac{x \text{ ft}}{5 \text{ m}} = \frac{3.28 \text{ ft}}{1 \text{ m}}$$
$$\frac{5 \text{ m}}{x \text{ ft}} = \frac{1 \text{ m}}{3.28 \text{ ft}}$$

Objective: SWBAT convert from one unit to another by way of conversion factors and describe in writing what the solutions to problems mean to the real world.

Another way we convert units is using multiplication.

We use this method when we have to convert multiple units.

Objective: SWBAT convert from one unit to another by way of conversion factors and describe in writing what the solutions to problems mean to the real world.

Practice

3. I drove 45 miles/hour, how many ft/sec is that?

$$\frac{45\cancel{\text{mi}}}{1\cancel{\text{hr}}} \cdot \frac{5280\cancel{\text{ft}}}{1\cancel{\text{mi}}} \cdot \frac{1\cancel{\text{hr}}}{60\cancel{\text{min}}} \cdot \frac{1\cancel{\text{min}}}{60\text{sec}} = \frac{237600\text{ft}}{3600\text{sec}}$$
$$= \boxed{\frac{66\text{ft}}{1\text{sec}}}$$

Objective: SWBAT convert from one unit to another by way of conversion factors and describe in writing what the solutions to problems mean to the real world.

Practice

4. A horse can travel 44 miles per hour, how many centimeters per second is that?

$$\frac{44 \cancel{\text{mi}}}{1 \cancel{\text{hr}}} \cdot \frac{5280 \cancel{\text{ft}}}{1 \cancel{\text{mi}}} \cdot \frac{12 \cancel{\text{in}}}{1 \cancel{\text{ft}}} \cdot \frac{2.54 \boxed{\text{cm}}}{1 \cancel{\text{in}}} \cdot \frac{1 \cancel{\text{hr}}}{60 \cancel{\text{min}}} \cdot \frac{1 \cancel{\text{min}}}{60 \boxed{\text{sec}}} = \frac{708113.6}{3600}$$
$$1966.9 \approx 1967 \frac{\text{cm}}{\text{sec}}$$

Objective: SWBAT convert from one unit to another by way of conversion factors and describe in writing what the solutions to problems mean to the real world.

Warm - Up

1. 543790 seconds to days

$$\frac{543790 \cancel{\text{sec}}}{1} \cdot \frac{1 \cancel{\text{min}}}{60 \cancel{\text{sec}}} \cdot \frac{1 \cancel{\text{hr}}}{60 \cancel{\text{min}}} \cdot \frac{1 \text{day}}{24 \cancel{\text{hr}}} = \frac{543790 \text{days}}{86400} \approx 6.3 \text{ days}$$

2. 43 miles per hour to inches per minute

$$\frac{43 \text{mi}}{1 \cancel{\text{hr}}} \cdot \frac{5280 \text{ft}}{1 \cancel{\text{mi}}} \cdot \frac{12 \text{(in)}}{1 \cancel{\text{ft}}} \cdot \frac{1 \cancel{\text{hr}}}{60 \text{(mins)}} = 45408 \text{ in/min}$$

Objective: SWBAT convert from one unit to another by way of conversion factors and describe in writing what the solutions to problems mean to the real world.

Warm - Up

1. 17 years to minutes

2. 6.54×10^8 meters to kilometers. (1000m = 1 km)

2. 16 wks \rightarrow seconds

$$\frac{16 \text{ wks} | 7 \text{ days} | 24 \text{ hrs} | 60 \text{ min} | 60 \text{ sec}}{1 \text{ wk} | 1 \text{ day} | 1 \text{ hr} | 1 \text{ min}} = \frac{9676800 \text{ sec}}{1}$$

11. $\frac{1 \text{ drop}}{10 \text{ lbs}} \times \frac{x}{150 \text{ lbs}} \quad \frac{15 \text{ drops}}{4 \text{ doses}} \times \frac{x}{1 \text{ dose}} \quad x = 3.75 \text{ drops}$

4 doses
